

During the 9 months the road had an Ecobond SprayOn application to reduce surface abrasion from traffic and water (as the road is used as a storm-water drain).

Municipal officials reported that the approach was significantly more cost effective than their other options.

CONCLUSION

Sustainable resources are needed to solve today's problems and to ensure that they don't cause new problems tomorrow. Ecobond products allow interesting new options to solve existing engineering and financial problems faced in road construction projects in a more sustainable way.
